

CLEANTEX

ISSUE Number 04 OCTOBER 2022

IN THIS ISSUE:

- Current **status of the project**
- Cleantex summer school
- Cleantex 5th Project **Meeting**
- Relevant related **news**

CURRENT STATUS OF THE PROJECT

The **IO3**, the **E-book**, is **already finished**. It compiles several examples of good practices directly related with the sustainability of the textile industry. Particularly, about eco-design initiatives. It is freely available in the Cleantex website. **Download** it [here](#).

The **IO4 Training Summer Course**, **already took place** last July in Ljubljana with students from the universities taking part of the Project. During that week, the educational materials and resources the partnership developed were used and tested by the students. A **very positive feedback** was given from them!

CLEANTEX SUMMER SCHOOL

The Summer Course was a success. More than twenty students coming from Lithuania, France and Slovenia followed, during a week last July, the learning structure and methodology proposed by the IO, bootcamp.

It consisted in exploiting the benefits of physical and virtual learning. During the previous weeks, students could train autonomously through a virtual platform with contents and tests (MOOC). Then, once in Ljubljana, they would work under a small group teamwork format where each team would develop a sustainable initiative according to an industry need.

To endorse the experience with more transversality and knowledge, some visits to companies were organized by **UL**.

Students during the visit to a company

At the end of the week, students could evaluate the whole experience and the feedback was excellent. They focused the best reviews on the tutors' support, the visits, the content, the platform, the hackathon format and the organization. More info [here](#).

CLEANTEXTM 5TH PROJECT MEETING

Last September the Cleantex consortium met physically, in their **5th meeting**, to follow up the current advance of the project.

The event was held in Ljubljana, Slovenia, and was hosted by **UL**.

During the meeting, several topics were discussed. The most relevant ones were the completion of the E-book, the Training Summer Course review, some financial and management aspects as well as some project dissemination and quality guidelines.

After the meeting, partners had the chance to visit UL facilities and labs.
